

Speak clearly. Be understood.

janqua helps enterprise and individual language learners master pronunciation and speak with confidence and clarity. Its specialist AI coaches and in-depth linguistic analysis set it apart from other language-training apps.

Multiple

target languages and dialects

5

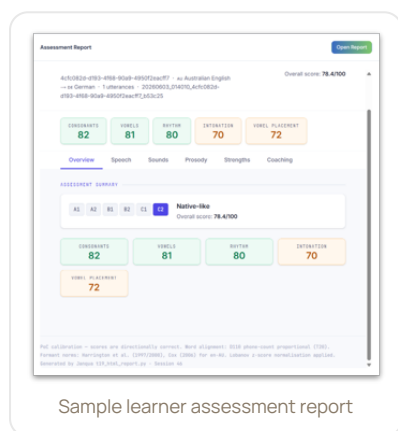

specialist AI coaches, led by Aria

A1 to C2

scores broadly aligned with CEFR levels

HOW IT WORKS

You speak, janqua listens, Aria coaches

1 Assessment

Learners read graded passages in their target language. janqua scores phoneme accuracy, flow, rhythm and stress and, for Mandarin and Cantonese, tone, against native speakers.

2 Analysis

A detailed report breaks speech down sound by sound and word by word, with pitch and rhythm compared to a native speaker and a replay in the learner's own voice.

3 Improve

Aria assigns specialist coaches who explain how to adjust jaw, tongue and lips, and set targeted drills with immediate scoring and feedback.

INDUSTRY SOLUTIONS

Contact centres

Poor clarity means longer calls, lower Net Promoter Scores and lost business. janqua helps agents improve quickly and measurably.

Education

Analysis across phonetics, prosody, flow and tone gives language teachers insights general-purpose tools can't.

Aviation

Pilots and controllers must reach ICAO English proficiency Level 4. janqua's aviation corpus targets the pronunciation part.

Become a Foundation Partner

We're offering two to three organisations in each of these areas the chance to become janqua Foundation Partners, with a free pilot.
